Motorlite Technology

Powered by a 12 volt Li-ion rechargeable battery motor, Motorlite guarantees superior motorised blind performance. Now, no more cords to pull or create the atmosphere you want. Motorised blinds are perfect for all areas of the home, including bedrooms, study, kitchen and out-of-reach windows.

Open your blinds at the push of a button and discover a whole new world of convenience with Motorlite, a cost-effective motorisation alternative that you can simply plug in and play!

With Motorlite's wireless motor, you don't need an electrician nor have to pay for additional costs associated with hardwiring motors.

More importantly, the internal Li-ion battery offers up to 600 blind open and a full 6-hour charge. In other words you can experience up to three months of ease and convenience before charge is required*.

Key benefits of Motorlite:

Easy controls

Choose from smart or fifteen channel control options to manage the household.

No electrical wires – simply plug in and play!

Motorlite is fitted the exact same way as a hand-operated blind that requires no special electrical skills. Now you can add in a touch of luxury in your home without any additional costs associated with hardwiring motors or an electrician.

Customisable

The advanced remote settings enable you to program your preferred blind placement so you can access that favourite position every time.

Durability

Opening and closing your blinds manually can take quite a toll on not only the quality, but also the lifespan of the blind. Through wireless remote technology, you will be able to smoothly operate your blinds using the remote control to ensure greater durability.

Safe and secure

Loose cords and chains are dangerous to both young children and pets. As the motorised blinds do not require traditional chains or cords, you'll be assured knowing your children and pets are always safe.

Set and forget

With the option of powering your motorised blinds with solar and positioning where there is full sun, you can set and forget about charging! You can simply motorise and forget!

*Number of cycles depends on size of blinds.
